EDUCATION

California Polytechnic State University, San Luis Obispo

Expected June 2028

Bachelor of Science in Computer Science, Concentration in Data Engineering | GPA: 3.78

San Luis Obispo, CA

- **Relevant Coursework:** Data Structures, Object-Oriented Programming & Design, Computer Organization, Design & Analysis of Algorithms, Systems Programming, Database Systems
- **Honors:** HSF Scholar (2026), President's Honors List, Dean's List (6 quarters), TELACU Scholar (3 years)

EXPERIENCE

Tech Developer Intern

May 2026 – Aug 2026

Sponsors for Educational Opportunity (SEO)

New York, NY (Remote)

- Built, shipped, and demoed **2 full-stack applications** spanning authentication, payments, validation, data persistence, and third-party API integrations across multiple internship projects
- Delivered features in **1-week Scrum sprints** within **4-engineer teams**, coordinating backend, frontend, database, and API changes while debugging cross-stack issues across Flask, React, and SQLAlchemy
- Led the **payments and validation workstream** for Hop-In, resolving code-review feedback and test failures before launch; earned **Best Overall Project** among 10+ competing teams

Kickboxing Instructor

Jan 2026 – Present

Cal Poly ASI

San Luis Obispo, CA

- Instruct kickboxing classes of **30+ students** weekly, designing session plans and adapting coaching to skill level in a fast-paced group environment

PROJECTS

Hop-In (Best Overall Project) | *Python, JavaScript, Flask, React, Vite, Supabase, PostgreSQL, Stripe, Chakra UI*

- Engineered **5 Stripe-related payment routes** across Flask and React for authorization, status handling, webhooks, and driver onboarding, connecting payment state with Supabase-backed ride transactions
- Implemented **rider-validation safeguards** for authorization, duplicate-request prevention, and scheduling conflicts, preventing invalid and repeated ride transactions
- Developed **backend and frontend workflows** for ride posting, ride requests, payments, and trip coordination using React, Flask, Supabase, and PostgreSQL

Market Data Aggregator | *Java, Spring Boot, JPA, JUnit, Mockito, MockMvc*

- Engineered a **Spring Boot** backend service that aggregates price data from multiple simulated sources, persists historical results with JPA, and exposes **8 REST endpoints** for current, historical, symbol, and time-range queries
- Designed data validation, caching, structured logging, and timestamp-based conflict resolution to reject stale or invalid market data and maintain consistent pricing results
- Developed **42 automated tests** across controller, service, persistence, and data-source layers using JUnit, Mockito, and MockMvc

Linguify | *Python, JavaScript, Flask, React, Vite, SQLAlchemy, Spotify Web API*

- Developed a **full-stack language-learning application** that transforms Spotify songs into interactive lessons with line-by-line translation and vocabulary review
- Integrated **4 external APIs** across Flask REST APIs and React workflows for Spotify authentication, lyric retrieval, translation, and music data
- Engineered **backend-to-frontend workflows** for authentication, song search, translation, and saved vocabulary, connecting Flask services with React interfaces and SQLAlchemy persistence

TECHNICAL SKILLS

Languages: Java, Python, C, SQL, TypeScript, JavaScript, Assembly, HTML/CSS, Bash

Frameworks & Libraries: Spring Boot, JPA, Flask, React, SQLAlchemy, JUnit, Mockito, MockMvc, Chakra UI

Tools & Technologies: Git, GitHub, GitHub Actions, Vite, PostgreSQL, MySQL, Supabase, VS Code, PyCharm, IntelliJ IDEA
